TAs: TBD

Course description

It is hard to imagine how the global economy would have developed if mankind would not have access to natural resources. Non-renewable resources have been used as tools, weapons, jewelry and money for thousand of years. This course is designed to familiarize students with the role of natural resources in the global economy. To do that, students will first be exposed to a historical overview of the critical role exhaustible resources played in economic development over the last centuries as well as more recently by discussing the negative externalities of fossil fuel consumption. In the second part of the course students will be familiarized with the main determinants of demand and supply of exhaustible resources and, thus, commodity price fluctuations. In the third part of the course we will explore the interaction between natural resource wealth and economic development by focusing on the main issues facing resource rich economics. This will allow students to understand why some countries succeed while other countries fail to benefit from their resource wealth. Throughout the course we will use theoretical and empirical tools from a variety of subfields in economics such as international economics, development economics, labor economics, economic history and political economy. Due to Russia's role as an important player in global commodity markets and the importance of natural resources for Russia's economy, Russia will be employed as a case study whenever possible. Throughout the course, the main goal will be that after successfully completing the course students will be able to make informed decisions on economic issues related to natural resources. This will prepare students for advising firms in the private sector, international organizations and policy makers on issues such as the optimal timing of resource extraction, the local impacts of industrial and artisanal resource extraction, on the macro-management of resource wealth as well many others.

Course requirements, grading, and attendance policies

A successful completion of Microeconomics, Macroeconomics as well as Econometrics is necessary. The grade will be a combination of the final multiple choice exam (40%), an essay on self-selected topic related to natural resources using data which I may help to get (40%) and a short presentation (executive summary with discussion) of an academic paper (20%). Attendance is compulsory during the presentation, but voluntary otherwise. Writing the essay and presenting are necessary to participate on the exam.

Course contents

Historical Overview (Lecture 1 - 2)

Main reference:

Diamond, Jared. *Collapse: How societies choose to fail or succeed*. Penguin, 2005.

Yergin, Daniel. *The prize: The epic quest for oil, money & power*. Simon and Schuster, 2011.

Classical Economics of Natural Resources (Lecture 3 - 5)

Main reference:

Hotelling, Harold. "The economics of exhaustible resources." *Journal of Political Economy* 39, no. 2 (1931): 137-175.

Krautkraemer, Jeffrey A. "Nonrenewable resource scarcity." *Journal of Economic Literature* 36, no. 4 (1998): 2065-2107.

Kilian, Lutz. "Not all oil price shocks are alike: Disentangling demand and supply shocks in the crude oil market." *American Economic Review* 99, no. 3 (2009): 1053-69.

Perman, R., Ma, Y., Common, M., Maddison, D., & McGilvray, J. (2011). *Natural resource and environmental economics* (No. 333.7 N285n). Pearson.

Natural Resources and Economic Growth (Lecture 6)

Main reference:

Mehlum, Halvor, Karl Moene, and Ragnar Torvik. "Institutions and the resource curse." *The economic journal* 116, no. 508 (2006): 1-20.

Course materials

Required textbooks and materials

Neither of the books is compulsory, but if you do not like these books, well, maybe you are picking the wrong option.

[1] Ross, Michael L. *The oil curse: how petroleum wealth shapes the development of nations*. Princeton University Press, 2012.

[2] Yergin, Daniel. *The prize: The epic quest for oil, money & power*. Simon and Schuster, 2011.

Academic integrity policy

Cheating, plagiarism, and any other violations of academic ethics at NES are not tolerated and will be punished. This includes self-plagiarism: students cannot submit projects that are identical to or with minor modifications of those submitted for other courses. Major modifications might be allowed but must receive an explicit approval from the professor before submitting. Failure to declare overlap or submitting projects with high similarities to existing works will result in severe punishment. Students must adhere to these regulations as part of the NES Honor code. Course projects are subject to random plagiarism checks.
